Summary

Junior Web Developer with a background in electronics and software development, building full-stack web applications using JavaScript, Node.js, Express, and PostgreSQL. Experienced designing REST APIs, implementing authentication, and developing responsive user interfaces. Committed to clean, maintainable code.

Technical Skills

- Languages: JavaScript, Python, SQL
 - Frontend: HTML5, CSS3, React, EJS
 - Backend: Node.js, Express
 - Databases: PostgreSQL
 - Tools: Git, GitHub, VSCode, Cursor
 - Concepts: REST APIs, OAuth, Authentication, Encryption & Hashing
-

Projects

- **Blog Website** — *(HTML, CSS, JavaScript, Node.js, Express)*
 - Built a full-stack blog platform supporting CRUD operations with RESTful routing and server-side rendering
 - Structured application using Express middleware and modular route handling
- **Book Notes Website** — *(HTML, CSS, JavaScript, Node.js, Express, PostgreSQL)*
 - Built a full-stack book tracking application with PostgreSQL persistence and RESTful routing
 - Implemented SQL-based sorting to allow users to filter entries by date read and rating
 - Designed relational database schema and managed data with full CRUD operations
- **Personal Weather Website** — *(HTML, CSS, JavaScript, Node.js, Express, IPAPI, OpenWeatherMap API)*
 - Integrated IP geolocation and OpenWeatherMap APIs to dynamically fetch current weather and 5-day forecasts
 - Implemented asynchronous API calls with error handling for reliable data retrieval
 - Used EJS templating and partials for modular server-side rendering

Freelance Work

- **DW Plumbing — Website Design & Development**
 - Designed and developed a website for a local plumbing company to improve their online presence
 - Built responsive UI and implemented a customer-facing scheduling request form

Certifications

- Full-Stack Web Development — Udemy
